

WHITEWATER®

EST. 1980

WhiteWater was born in 1980 with one clear purpose, to create places where families unite and make joyful lasting memories.

We achieve this by standing alongside our customers from concept to completion of award-winning attractions, from slides to water rides and everything in between. We aim to inspire our clients by unleashing our creativity to realize their ambitions; we craft solutions which make each park unique. We are dedicated to making products that operators can count on, because we understand the importance of reliability and efficiency on the bottom line.

As market leaders, we put our success down to our attitude, in all our years we've never once forgotten why we're here – to help parks solve problems, create immersive experiences, and delight guests all over the world.

We're here to create places where fun can thrive.

Introduction

A Heritage of Excellence

For close to 40 years, we have maintained our place as the world's leading water park manufacturer by understanding what our customers and their guests both want and need. It's a position that we don't take for granted as it has been our customers' loyalty, insights, and ambitions that have helped WhiteWater to get to where it is today.

Water Slide Innovators

For close to 40 years, we have maintained our place as the world's leading water park manufacturer by understanding what our customers and their guests both want and need. It's a position that we don't take for granted as it has been our customers' loyalty, insights, and ambitions that have helped WhiteWater to get to where it is today.

Designed Right, Built Right

Using custom tools, developed in-house, including the world's most accurate and reliable 3D motion simulation software, we eliminate the need for expensive and time-consuming on-site trial and error, while maximizing the fun and thrill within a safe footprint.

Water Slides 101

Using Our Guide

To help you navigate our extensive water slide catalogue, we have created this useful guide that presents the top facts and figures you'll want to know when considering a water slide. Included with each water slide are icons representing their Experience Highlights, Features, and Options. For an explanation of each icon, keep reading.

If you already have a slide in mind, feel free to skip to that section. If you're still not certain, we've included some factors in the following sections that you may want to consider when choosing the right slide.

Slide Vehicles

Choosing your ride

One of your biggest considerations when deciding on a water slide is capacity. Guest throughput is an important part of your park's overall design. Different ride vehicles also present different ride experiences, varying space requirements, park demographics, and price.

Here are the five major vehicle types you will see on a WhiteWater water slide:

Family Raft

Our circular family raft design creates truly shared experiences by giving everyone on board a chance to see the expressions on their fellow riders' faces as they spin, splash, and slip towards the slide's finish. Available in 3, 4, and 6-person sizes, the raft's design allows for parents and children to sit close, in fact, you can fit the entire family in as long as their combined weight falls within in the prescribed weight limit. It's a nice touch for younger kids who might not want to sit too far from parents while also helping to boost your hourly throughput.

For operators, the circular design is more flexible as it allows 'uneven' numbers of riders, unlike with other raft designs—aiding dispatch because every group can take the next raft.

**No single person can weigh more than 136 kg (300 lbs) on any sized raft.*

Body

Technically, a body isn't a vehicle, but that absence of a vehicle means there's nothing between rider and slide, immersing guests into the experience and increasing the feeling of speed and excitement.

Inner Tube

Inner tube water slides are a great option when you're looking for a thrilling ride with a smaller flume size and footprint. Our inner tube slides enable a shared ride experience that also allows for both riders to face forward. 1-person and 2-person inner tubes can be easily carried up towers by kids eager to twist and turn with a friend or family member.

Some slides available in 3-person and 4-person inline inner tubes.

Mat

For a completely different riding sensation, mat racing slides gives guests the chance to fly like a super hero as they race headfirst down a slide. In this riding position, riders have the power to bank and steer their mats, giving them control over their ride. Mat Racers are another integral component of any water park, both for the competitive atmosphere they create and their high throughput potential.

Experience

360° Loop

Inspired by the thrilling loops of a roller coaster, guests will experience an exhilarating and dizzying 360° orbit on a steep inclined compound curve.

360° Revolutions

Courtesy of centrifugal forces, our Bowls speeds riders round and round for revolving fun.

Extreme Drop

A big feature on these slides are their terrifying, and sometimes surprise, extreme drops that set pulses racing.

Extreme Gs

Not for the faint of heart, these slides feature some of the most extreme speeds and forces of any water slides on the planet.

Freefall

On these slides, brave riders drop straight down, reaching speeds of up to 70 kph (45mph).

Zero Gravity

Guests won't have to leave orbit to experience a feeling of weightlessness on these slides.

Experience Highlights

Another important factor when choosing a water slide is the type of ride experience it delivers for your guests. It's essential that your park's ride mix features a variety of different thrills and sensations to appeal to all demographics and play types. Not everyone plays the same way and ensuring that there's a balance of experiences throughout your site creates play opportunities for all guests, keeping them in your park happier and longer.

Water slides come in all different shapes and sizes and with that offer a range of Experience Highlights, sometimes multiple in a single slide. Exceptional water slides are carefully designed to balance rider comfort and safety with anticipation and excitement.

It's more than just adding big dips and fast turns—it's weaving these features together in the right combination and sequence to produce a memorable and exhilarating ride experience. It's about guests winding through an enclosed flume to see an open drop ahead in the sunshine or the feeling of weightlessness at the apex of a high wall climb, with the anticipation of doing it again on the other side. More than just the pure exhilaration of dropping straight down a sheer wall, it's also having friends cheer on. It's about being able to see the look on your family members' faces as you see the turn coming, but they don't, then reminiscing about it after. And of course, you have to continue to ride until they can see the look on your face when you don't see the curve coming.

These icons will help you anticipate the ride experience that each slide is designed to provide:

Multi-Drops

After the excitement of the first drop, the anticipation builds when riders see additional drops looming ahead.

Multi-Oscillations

A timeless water slide experience, these slides swing riders back and forth multiple times as they make their way to the end of the slide.

Uphill Blasts

Expect the unexpected—riders gain, instead of lose speed on uphill sections as they're propelled ahead by powerful jets.

High-Banking Turns

Riders hug the curved walls of these slides as inertia accelerates them around the flume. The raft is accelerated to a vertical position allowing the rider on the high side to look directly down on the opposite-facing rider in the vehicle.

Water Slide Features and Options

Just as different water slides use different ride vehicles, a water slide's features and options can also vary. In this guide, we show a slides' standard components as 'features' and its available add-ons as 'options'.

Slide Dispatch

AquaLaunch Capsule with Integrated Dispatch Control

Not your typical start tub, our AquaLaunch Capsules can be found on our AquaDrop, AquaLoop, and Flatline Loop water slides. Guest enter an enclosed tube, face forward, have the door close in front of them, then await the countdown for the floor to drop out from under them and send them into a near-vertical freefall. All AquaLaunch Capsules come standard with integrated Dispatch Control.

Dispatch Control (Start Lights)

Dispatch Control assists water slide operators in managing their dispatches more efficiently by helping to ensure that slides are clear before dispatching another rider. When the slide is in use the light is red, once the slide is cleared, the light turns green.

Race Timers

Race Timers increase the competitive atmosphere on mat racers and any racing formation slides. An add-on to Dispatch Control, sensors track riders' starts and finishes to display their times on clocks at the bottom of slides.

Sound and Light Effects

Based on your park's theming, WhiteWater can create a custom Sound and Light package to complement your ride's slide path with multi-colour LED lights and sound effects.

Water Effects

Keep riders on their toes with surprise water features such as misters, water curtains, and arching jets. Or have our talented team create a custom water feature to heighten your slide's ride experience.

Capped

Some of our slide features, such as Abyss and Super Bowl, can be capped to produce dark sections which lend themselves well to Sound and Light Effects and AquaLucent additions.

Launch Conveyor with Integrated Dispatch Control

Launch Conveyors are an efficient, safe, and exciting way to dispatch riders into a slide with the simple push of a button. Available on most inner tube, inline raft, and family raft water slides.

Standing Start Tub

Standing Start Tubs can be added to the start of AquaTube Mat Racers, AquaTwist Mat Racers, and Whizzards. They give guests the ability to push off from a standing position instead of having to lower themselves down into a horizontal push off.

Double Start Tubs

Available on most inner tube, inline raft, and family raft water slides, Double Start Tubs help to keep lines moving smoothly, while boosting your capacity.

Open/Enclosed

A selection of our slides can have both open and enclosed sections. When you see this icon, it means that if a slide comes standard with an open section, an enclosed section can be added, and vice versa.

Sawtooth Finish

Our optional Sawtooth Finish makes for an impactful visual effect on a variety of slide features by adding giant teeth, waiting to swallow up daring riders.

Slide Finishes and Effects

AquaLucent Patterns

AquaLucent Patterns enhance your guest's ride experience by creating exciting visual effects. Add colourful bursts of light to otherwise dark tubes with translucent patterns, such as rings, polka dots, your logo, and more—the possibilities are almost endless and breathtaking.

Translucent FRP

Our Translucent Fiberglass technology has been developed to produce unparalleled clarity and strength in our slides, providing both riders and spectators alike with an eye-opening sliding experience.

Fiberglass Veils

Send your guests sliding down a giant snake or swinging on a jungle vine by transforming your slides with Fiberglass Veils. Choose from an extensive catalogue of designs to add patterned layers to the fiberglass surface and create a themed and immersive water slide experience.

Slide Exits

Run-out Lane

Run-out lanes have shallow water exits and can be used on a selection of body and vehicle water slides. They typically require more room than a Pool Entry but are easier to guard. Run-out Lanes are not available on 4 and 6-person family raft rides.

AquaGlide Exit

AquaGlide Exits are fiberglass run-outs with deeper water than a standard Run-out Lane and tend to have a smaller footprint than both run-outs and pools. They are available in a deck-mounted configuration, resulting in lower construction costs than a Pool Entry, and a below ground configuration for mounting flush with pool decks.

Pool Entry

Pool Entries exit riders into deeper water than a run-out lane; their depth being a factor in a slide's minimum height requirements. They typically take up less space than a Run-out Lane and, depending on design, may have more than one slide exit into them.

Checkered Flag Run-out

Up the ante on your mat racer slides by adding a fun black and white checkered flag run-out.

Slide Configuration

Custom Slide Path

Our team of experts can custom design your slide to work with your space requirements and existing slide towers—they can even design your slide path around your current slides.

Engineered for Efficiency

All of WhiteWater's water slides are designed to use less water, with low water entry tubs and minimal splash risers which results in lower costs for your park.

Fusion Experience

Our fusion combinations can take multiple water slide features to create double, triple, or even quadruple the experiences.

Racing Formation

Racing slides do not need to be limited to mat racers. Master Blasters, AquaLoops, and more, can be combined to create dueling slides. When Racer Timers are added, guests will love racing to beat family and friends.

Technology

Safety Sensors

Safety Sensors ensure for the safe operation of slides by monitoring for sufficient water flow prior to dispatches. Safety Sensors are standard on AquaLaunch, Master Blaster, and Whizzard Mat Blaster water slides.

Zone Control

Configuration dependent, Zone Control is standard on Master Blaster and Mat Blaster rides with 2 or more sections. In addition to ensuring sufficient water flow, Zone Control monitors each slide section, safeguarding that the slide path is clear before dispatching another raft or rider.

Touch Screen Control Panel

Standard on Master Blaster and Mat Blaster water slides, Touch Screen Control Panels monitor the slides' Variable Frequency Drives (VFDs) and safety sensors to detect and alert to faults.

Vehicle Conveyor

Required on 4 and 6-person family raft rides and optional on inner tube and inline rides, Vehicle Conveyors easily and conveniently transport your ride's vehicles from Pool Entries and AquaGlide Exits to the top of towers.

Smart Blast

WhiteWater's Smart Blast technology uses variable frequency drives (VFDs) and a proprietary control algorithm to dynamically engage pumps only when they're needed while the ride is in operation to generate significant power savings and reduce the wear and tear on mechanical equipment.

Slideboarding

Slideboarding is a real-life gaming experience within a water slide. Not only is Slideboarding available as a new slide installation, it can also be overlaid on existing 1.4 m (54") flumes that are 91.5 m (300 ft) or longer to revitalize an older ride with an exciting gamification element. Challenge-based and personalized, guests hit coloured targets as they race down the slide while listening to their chosen soundtrack; screens at the bottom of the slide celebrate riders' scores and show them their rankings.

We've Got You Covered

As you can see, there are a lot of factors to consider when choosing a water slide that will work for your park and your guests. WhiteWater knows that you have a lot to think about—so here are two things that you don't: safety and quality.

From concept to completion, WhiteWater designs its slides with safety in mind at every step. Our team of industry pioneers, former park operators, and experienced water slide engineers come together to create slides that are simulated, tested, and guaranteed to the highest safety standards.

This rigour of refinement is put into every aspect of our products, including quality. WhiteWater owns one of North America's leading composites manufacturers, FormaShape, and it is from their Canadian plant that we have established a Centre of Excellence. All of our fiberglass is tested for the most extreme of conditions to prevent against peeling and colour fading. It is from these tests that we develop our strict standards, which we then roll out to our global manufacturing plants to ensure consistency of results no matter where they may be made. We closely manage our supply chain to ensure that not only our standards for quality are adhered to, but also ISO standards.

What does this mean for you and your park when you buy a water slide, or any product, from WhiteWater? You will be buying the highest quality, safest, and most thrilling attractions on the market—attractions that we stand by with our WhiteWater Warranty.

Icons

As the company that started it all, we feel confident in saying that these slides are the icons of the waterpark industry. These are the slides that riders brag to their friends about riding, the slides that guests make a beeline for, the ones you put on your billboards. Designed to be as exciting to ride as they are impressive to look at, these iconic slides produce the most thrills, the biggest screams, and the fondest memories on the market.

SlideWheel®

Abyss

The largest funnel water slide in the industry, the Abyss is an iconic water park centerpiece, proven to thrill guests of all ages. Capable of towering nearly 30 meters (100 feet) in the air, the Abyss makes an impactful visual presence that will draw guests in, eager to traverse its expansive valley.

The large, exhilarating drop into the extended, flat-sided funnel and reduced water use result in an increased vertical climb to maximize the number and length of side-to-side oscillations without risk of rafts flipping.

Anaconda

The colossal Anaconda water slide makes a lasting impression on riders and spectators alike. Its cavernous channel punctuated with a razor-sharp sawtooth is the largest flume of any water slide on the market at 9.1 meters (30 feet) wide.

Excited riders begin in a winding serpentine before dropping a pulse-pounding 4 meters (13 feet) into the Anaconda's belly. There, their raft oscillates back and forth, banking up to 4.6 meters (15 feet) high on the walls as they bank around the slide's enormous curve before exiting into a pool.

AquaSphere

One of the most visually unique slides at any water park, AquaSphere's large orb will pique your guests' curiosities about the adventures contained within—and the only way to find out is by going for a spin.

Riders can speed down a serpentine flume or experience a straight blast on a Family Blaster, before being injected into large spheres where they bank around 90-degree corners to complete extreme oscillations that seem to last forever.

Boomerango

One of the first iconic family raft rides in the industry, the Boomerango is consistently one of the most fun rides in any water park. Its imposing wall makes for amazing guest photos and lends itself to inspired theming opportunities.

Its revolutionary design, which combines a traditional serpentine, followed by a heart-racing plunge that leads to an ascent up a near vertical wall, all before one last “zero-gravity” hump is why Boomerango repeatedly has the longest lines of any ride.

Bowls

Bowls make a great addition to your ride mix by delivering a memorable centrifugal orbiting ride experience while also creating an attention-grabbing focal point in your park. Play with colours and fiberglass finishes to design a one-of-a-kind bowl to showcase your park's brand and theme.

Champagne Bowl

Smartly designed to eliminate the need for a run-out lane or pool entry, the Champagne Bowl has an innovative staircase exit allowing it to fit in a compact footprint. Initially developed for use on cruise ships, it has become a staple where space is limited with its ability to squeeze large amounts of fun into a small area.

Super Bowl

Thrill-seekers are launched into the large cavernous bowl where centrifugal forces keep riders high on the wall for several rotations. The Super Bowl provides prime viewing opportunities as patiently waiting guests can watch riders circling below, building anticipation for the fun which is soon to come.

Space Bowl

Starting with a high-speed drop through an AquaTube, riders are launched into the bowl where centrifugal forces keep riders high on the wall for several rotations. The Space Bowl provides a bowl option for parks with minimal room, because of its minimal footprint.

Galaxy Bowl

Take the family for a quick spin in the family-friendly Galaxy Bowl. Family rafts make a gentle gradient into the bowl for one smooth spin around before exiting with a big drop into a dark serpentine slide path.

Manta

An impressive centerpiece for any water park, without the associated price tag, Manta's riders drop from an open flume, giving spectators multiple locations from which to see the exhilaration on the riders' faces.

Not only is Manta one of the most visually-impressive attractions at any water park, it's also one of the most thrilling. As riders near the end of the enclosed flume, the monstrous walls of the Manta are revealed, building the anticipation for what's to come. What happens next is a heart-pumping drop into the Manta valley below, before the raft rises up the other side to reach a "zero-gravity" apex followed by a drop back down, then up the other side, and so on, until reaching the Manta's tail.

Python

At 6.1 meters (20 feet) in diameter, the Python's flume makes a striking addition to any water park.

The ultimate family rafting experience offers a multitude of sensations with high banks and steep drops in the Python's vast mega-tube. Excited guests drop into the Python's cavernous flume to experience exhilarating oscillations. Big splashes create bigger smiles, helping to make lasting and shared memories.

Rattler

Each rattle bigger than the last, the Rattler water slide builds excitement and anticipation until the very end.

Guests drop into the uniquely engineered rattles sending them into unexpectedly fast, near-vertical oscillations for big splashes and thrills. With progressively longer cylinders, the Rattler builds rider excitement as each rattle gets faster than the last, creating more and more oscillations.

SlideWheel®

The world's first rotating and pendulating water slide, SlideWheel combines three diverse riding experiences into one ride. With intense g-forces, backwards sliding, oscillating movements, and plenty of airtime fun, SlideWheel is a mix of riding sensations. Its dynamic and unique motion gives riders within the slide the impression that the ride is more than twice as long as it is.

SlideWheel's rotating flumes, when combined with a sound and light package, create a visual spectacle, never before seen at a water park.

Fusions +

WhiteWater's Fusion water slides combine multiple features to produce a kaleidoscope of sensations and thrills all in one momentous ride. With the flexibility to mix and match experiences, parks can combine two, three, or more features to create "world's first" attractions that will become the anchors of their venues. The possibilities are endless.

AquaLaunch

Our AquaLaunch slides build anticipation the moment riders begin their ascent to the top of the tower. Once they reach the platform they can watch as the riders ahead have the floor drop out beneath them, which is then quickly followed by screams of excitement. Next, it's their turn to step into the capsule, have the door close shut, and stand facing forward with their arms crossed as they wait for their turn to freefall straight down. 3...2...1

AquaDrop

From the ground, AquaDrop looks simple enough, a straight drop into a run out lane. It's a different story however, once you're standing in the capsule, looking out at the height you're about to free fall from...

AquaLoop

The world's first and only truly looping water slide, AquaLoop starts with a freefall that accelerates riders around a complete loop on a 45-degree angle, delivering one of the most intense and thrilling slide experiences for both riders and spectators alike. AquaLoop's Translucent flume showcases the gravity-defying rider journey to eager guests waiting on the platform and on the ground, making for an impressive photo op.

Flatline Loop

Like the AquaLoop, Flatline Loop combines the anticipation of the AquaLaunch Capsule with the visual impact of a looping Translucent flume, this time, sending riders racing through a horizontal figure-eight loop.

Speed

In addition to the extreme speeds of our AquaLaunch slides, WhiteWater also offers a selection of speed slides, featuring gripping velocities.

Freefall / Freefall Plus

Available in two options, the Freefall is an open water slide with a straight steep drop; while the Freefall Plus has an enclosed entrance to build anticipation before opening up and dropping straight down.

High Speed AquaTube

A water park essential, the versatile AquaTube water slide can be configured with a range of slopes and slide paths to thread through a slide complex and takes up no additional footprint. Our High Speed AquaTube is 25-50% faster than a traditional AquaTube and delivers a comfortable ride experience in the thrill-level of your choosing.

Speed Slide

The unrelenting contours of our Speed Slide provide maximum allowable compressions that quickly transition to gut-wrenching feelings of weightlessness.

For Inner Tube, Inline, and Family Raft Speed Slides see: Accelerator

Essentials

AquaTube

A water park essential, the versatile AquaTube water slide can be configured with a range of slopes and slide paths to thread through a slide complex and takes up no additional footprint. This iconic water slide can vary in thrill factor, making it perfect for younger kids, teens, and thrill-seekers. Switch things up and turn your AquaTube into a Mat Racer, to learn more, see: Competition water slides.

AquaTwist

A high-thrill racing ride, two AquaTubes tightly twist around each other, sending riders into a high-speed corkscrew to the bottom.

Cyclone

Cyclone is an all-in-one slide which comes complete with tower, stairs, and slide. Because the stairs are within the loop of the slide, Cyclone can easily fit into tight spaces.

Drop Slide

A little slide with a big ending, Drop Slides let riders catch big air before dropping them into a deep-water pool.

Blasters

We've combined water slide excitement with roller coaster thrills via our advanced water technology that accelerates riders uphill for a completely new riding experience.

Family Blaster

Master Blaster®

Mat Blaster

Blasters

Master Blaster®

The world's first uphill water coaster uses advanced water technology to power riders through a gravity-defying experience. Its flexible slide path is ideal for fitting into unique site shapes and snaking around existing attractions. With its potential to have a shorter tower than traditional water slides of equivalent slide length, it is a great option to deliver high entertainment value where height constraints are an issue. Inject energy into your water park with a custom designed slide path and an exhilarating ride experience.

For a family raft blaster experience, ask about our Family Blaster water slide.

Family Blaster

Mat Blaster

Part Mat Racer, part Master Blaster, Mat Blaster is the world's first uphill mat racer. We've literally upped the thrill of mat racing by adding uphill blasts to the already exciting drops and undulations of this head-first race to the finish.

Mat Racer

Mat Racers

Mat Racers pack a high volume of fun into a compact footprint with options to enhance the experience with stop and go lights, racing theming, and a race timer.

Multi-Lane Mat Racer

Side-by-side Multi-lane Mat Racer water slides take riders on an exciting head-to-head competition over a series of gut-wrenching bumps, accelerating riders towards the finish line. This highly competitive attraction encourages guests to race again and again.

AquaTube Mat Racer

Combine the corkscrew thrills of our AquaTwist with the head-first fun of our Mat Racer with an AquaTwist Mat Racer.

AquaTwist Mat Racer

Combine the corkscrew thrills of our AquaTwist with the head-first fun of our Mat Racer with an AquaTwist Mat Racer. Switch things up and turn your AquaTube into a Mat Racer, to learn more, see: Competition water slides.

Whizzard

Riders are dispatched into enclosed high-speed AquaTubes that spiral alongside each other through multiple lanes of twists, turns, and a 360-degree loop before a surprise drop into open lanes, for more racing action.

Mat Blaster

Part Mat Racer, part Master Blaster, Mat Blaster is the world's first uphill mat racer. We've literally upped the thrill of mat racing by adding uphill blasts to the already exciting drops and undulations of this head-first race to the finish.

Slideboarding

Slideboarding is pushing traditional slides into the future by transforming a classic water park experience into the world's first video game integrated water slide. Empower riders to take control of their ride experience by customizing it with their own profiles. Challenge your guests to hit the right buttons as they zoom down the slide, activating as many of the dynamic targets as they can. At the bottom, riders can see their scores and where they rank on the leaderboard, spurring them to race again.

Family
Raft Ride

Accelerator

Towering an imposing 27 meters (90 feet) into the sky, Accelerator isn't for the faint of heart. As brave riders climb into the inline raft at the start they await the first of three adrenaline-charged plunges, each one scarier than the last. The final drop gives riders a feeling of virtual weightlessness as the plummet 15 meters (50 feet) down to reach an impressive top speed of 63 kph (39 mph) before smoothly decelerating in the shutdown lane below. Accelerator's intensely fast undulations and drops make it one of the fastest water slides at any water park.

For 2-person or family raft versions with a less extreme drop, ask us about our Colorado Drop and Bubba Tub water slides.

Typical Platform Height	1.6 m / 63 in	1.6 m / 63 in	3.0 m / 118 in	1.8-3.0 m / 71-118 in
Flume Width	1.4 m / 54 in	1.4 m / 54 in	1.4 m / 54 in	1.4 m / 54 in

	Ramp Slide	Mini Body Slide	Mini Multi-Lane
			
	1-person	1-person	1-person
Vehicle	Body	Body	Body
Estimated Hourly Capacity	240 riders	240 riders	240 riders
Standard Dispatch Rate	15 sec	15 sec	15 sec
By the Numbers			
Typical Maximum Velocity	30 kph / 20 mph	15 kph / 10 mph	30 kph / 20 mph
Minimum Rider Height	0.9 m / 36 in	0.9 m / 36 in	0.9 m / 36 in
Maximum Weight	91 kg / 200 lbs	91 kg / 200 lbs	91 kg / 200 lbs
Recommended Flow Rate	6 l/s	25 l/s	6 l/s
	100 USGPM	400 USGPM	100 USGPM
Typical Platform Height	1.2 m / 47 in	2.0 m / 79 in	1.3 m / 51 in
Flume Width	1.4 m / 54 in	0.9 m / 36.9 in	0.9 m / 36.9 in

Experience			Features	
				
Zero Gravity Sensation (Boomerango)	Multi-Oscillations (AquaSphere, Boomerango, Rattler)	High-Banking Turns (AquaSphere)	Run-out Lane (Mini Multi-lane)	Engineered for Efficiency

Options				
				
Custom Slide Path	Double Start Tubs (AquaSphere, Boomerango, Open Flume, Rattler)	Sound and Light Effects (AquaSphere, Boomerango, Open Flume, Rattler)	Water Effects (AquaSphere, Boomerango, Open Flume, Rattler)	Fiberglass Veils (AquaSphere, Boomerango, Open Flume, Rattler)
				
AquaLucent Patterns (AquaSphere, Boomerango, Open Flume, Rattler)	Translucent FRP (AquaSphere, Boomerango, Open Flume, Rattler)	Pool Entry (Except Mini Multi-lane)		

Standard Specs

The below table displays standard specifications for typical water slides organized around vehicle type and are meant to provide an approximation for capacity, rider height and weight requirements, and flume width. These numbers are estimates only, based on typical slide designs and will vary depending on the final design of your installed slide because almost every slide we make is custom-designed.

As with the table below, any specifications you see for specific water slides are estimates based on a typical slide, please always consult WhiteWater about the numbers for your specific slide.

Vehicle	Dispatch ¹	Est. Hourly Capacity	Weight Restriction (max)		Height Requirements (min)				Vehicle Size ²		Flume Width		Pool Depth ³	
					Run-out Lane		Pool Entry							
			Metric	Imperial	Metric	Imperial	Metric	Imperial	Metric	Imperial	Metric	Imperial	Metric	Imperial
Body														
Kids	15 secs	240 rider	91 kg	200 lbs	0.9 m	36 in	0.9 m	36 in	N/A	N/A	0.9 m	36.9 in	0.45 m	18 in

*Minimum height requirement with supervising companion.

¹Dispatch rates listed are based on average slide lengths and are subject to change based on site specific slide designs.

²Averages based on recommended manufacturers. Always consult with WhiteWater before purchasing inner tubes or family rafts for your specific slide.

³Typical minimum pool depths listed. Not for construction. Please consult with WhiteWater regarding final specifications for your specific slide.

⁴When combined with an inner tube pool, minimum height requirement is 1.2 m (48").

⁵4-person and 6-person FRR slides are not available with a run-out lane.
